PROJECTS

RAIoT - Robotics & AI of Things Platform

IoT / Robotics

Duration: 2023 - Present

Organization: RAIoT, Amity University Rajasthan

Built a comprehensive full-stack web application serving as the central platform for the RAIoT (Robotics & AI of Things) community. The platform features a dynamic dashboard with real-time inventory management, component tracking, GitHub repository integration, and team collaboration tools. Developed using Next.js, TypeScript, and Firebase with a modern, responsive UI for seamless cross-device access.

DEPLOYED

GROUP PROJECT

InteliCart - Smart HealthCare Shopping

HealthCare

Duration: August 2024

Organization: Self-Developed

Developed InteliCart, a website that allows users to scan product images for ingredient analysis, health risk categorization, and healthier alternatives. It includes quick billing, ingredient breakdowns, inventory tracking, and displays product pros and cons. Additionally, it compares prices across multiple e-commerce platforms to show the lowest price, helping users make informed and cost-effective purchasing decisions.

GROUP PROJECT

Intelligent Waste Management System (IWMS)

IoT / Embedded

Duration: January 2022 - 2024

Organization: RAIoT, Amity University Rajasthan

Designed an Arduino and ESP-based Intelligent Waste Management System featuring GPS integration for live location tracking and optimized routes. Incorporated sensor-driven fill level monitoring with API

notifications for Telegram, WhatsApp, SMS, and Gmail for dumpsters, enhanced with an automatic lid lock system, adhering to compliance standards. The system is fueled by solar energy, AC, or a battery for maximum sustainability and reliability.
